

ENLIGHTOR 2

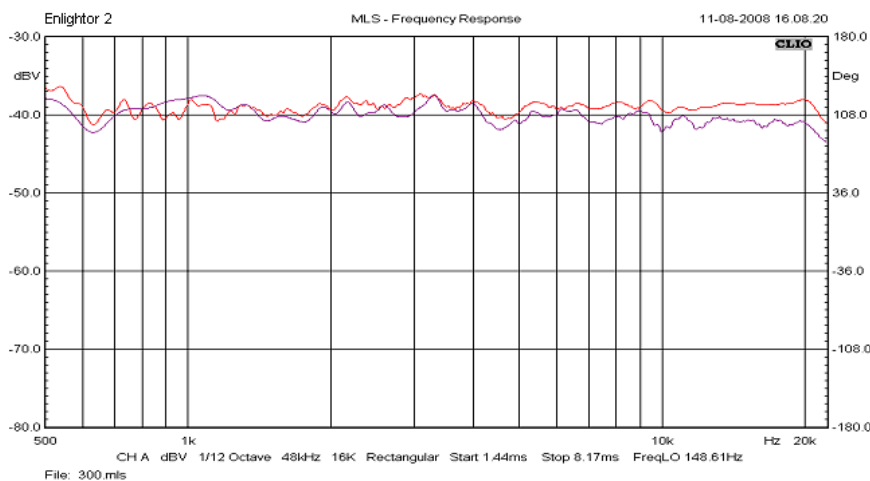

Enlightor 2 is the ultimate Acoustically Transparent projection surface for medium to large screens (i.e. 100 in. base width or more).

The complex «airy» structure of the Enlightor 2 fabric provides the very best permeability to sound waves, which is definitely the #1 choice for audiophile installation.

Developed to meet the needs of full HD digital projection, Enlightor 2 fabric uses a proprietary woven structure made up of a compound PVC thread. Its design eliminates any unacceptable moiré effect (as typically produced by fixed pixel projectors when shown on conventional perforated or micro-perforated screens).

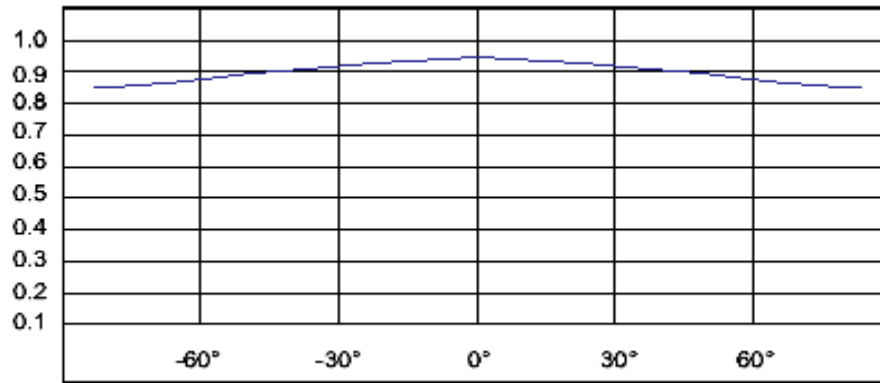

Enlightor 2 conforms to SMPTE colour balance guidelines, and offers a negligible gain loss when compared to perforated screens.

Specifications

Acoustic response comparing Enlightor 2 screen, combined with its black backing layer (shown in purple) with the reference speaker's direct output (shown in red).

Note even response and minimal loss at all frequencies

Projection gain vs. viewing angle

Other features

- Gain - 0.95
- Flame-Retardant (US)
- M1 (F, S, I)
- B1 (UK)
- Thickness: 0.70 mm
- Weight: 410 g/sq.m
