

In-Ceiling Eclipse

In-ceiling integration made easy

Photo by courtesy of Steve Coveney's Home Cinema

A motorized retractable screen integrated in a plenum is the ultimate solution to transform a living room in a stunning Home Theater. Invisible when retracted, the acoustically transparent projector screen becomes the core of the cinematic experience when open.

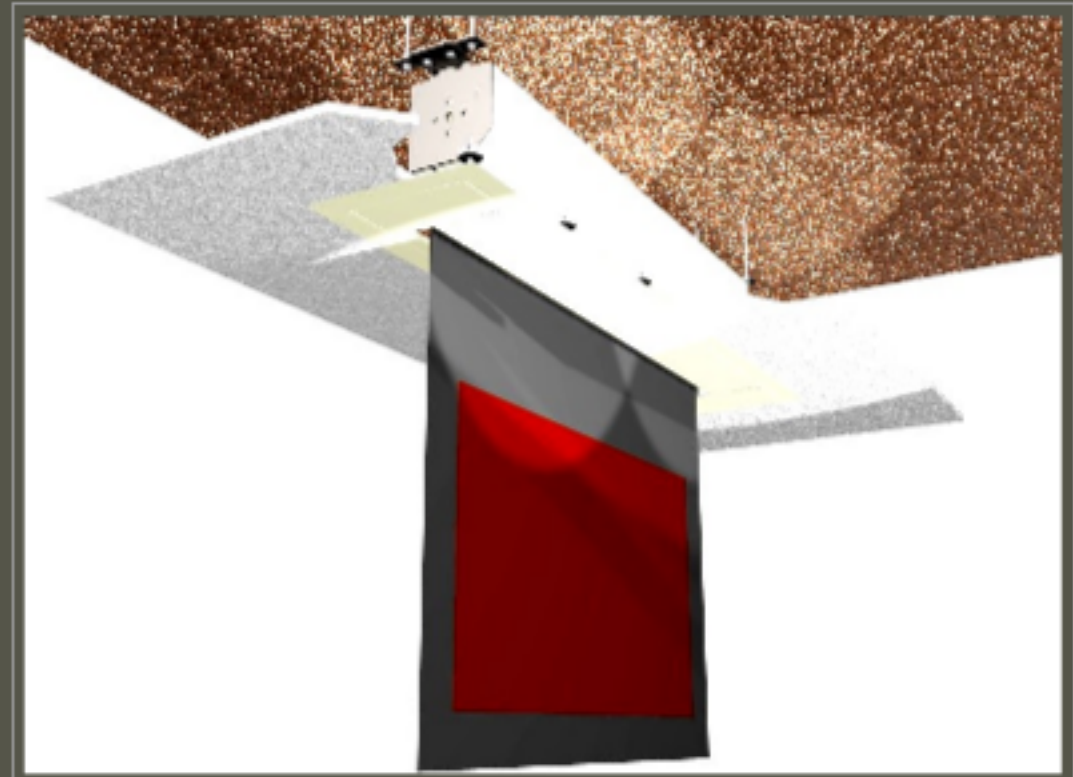

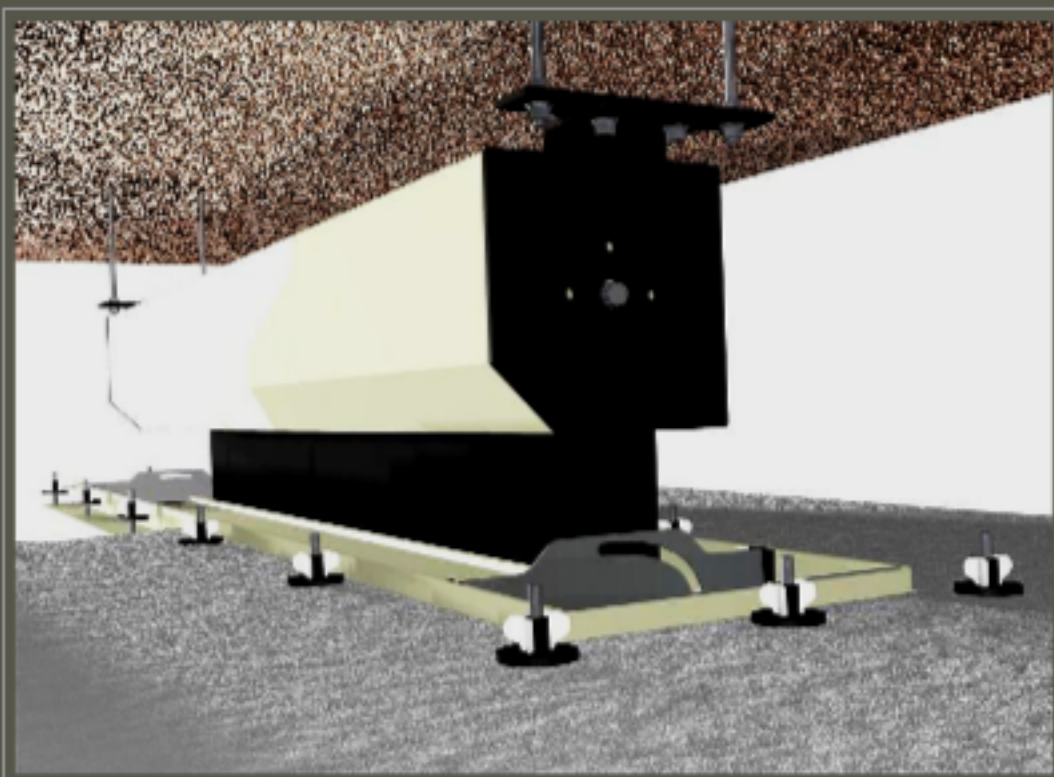

Screen Excellence ICE concept (patent pending) is unique as it dramatically eases the process of installing a motorized screen in the plenum of a ceiling. It comprises two main elements, which, not being mechanically linked, are fully adjustable in three dimensions :

- An electric rolling screen
- A ceiling adapter

The electric screen is fixed to any structural part at the top of the plenum, and is provided with adjustments possibilities in three directions. The ceiling adapter (ADA) is totally independent from the screen, being fixed directly to the plasterboard ceiling or false-ceiling.

The ceiling adapter comprises two parts, a fixed one which is directly connected to the ceiling, and a mobile part allowing an easy access to the screen itself. This mobile part comprises either a slot or a motorized trap door, according to the version. Both version are fully compatible and can be retrofitted.

Like any *Screen Excellence* projector screen, the ICE system is equipped with the exclusive Enlightor range of fabrics as standard, providing uncompromised image quality and sound transparency.

IMPORTANT NOTICE : THE ADA PART IS FINISHED WITH A PRIMER. IT IS TO BE PAINTED WITH THE CEILING PAINT.
